User can add roles by clicking on the add role button and entering info. Users can be distinguished by student, club officer, event organizer, and university admin. Once inserted, an individuals information can be fetched in the database with identifiers like last name, email, major, and grade level. As you can see in the screenshots with the GUI, once the student adds

their role and info, you can see the supabase get updated with that information now inserted into the database. This works for all roles and their subsequent databases.

Users can edit the profile information for any role in the system. This enables real time updates for roles such as club officers, students, event organizers, and others to let the database stay accurate and up to date. As you can see in the screenshots, Akshay decides to update his profile, including his new roles and change of major. You can see his updated GUI after updating, as well as the database containing his information has now also changed. If Akshay decides to change his major and any roles that may align with his new affiliation, he can update his profile and any other information like so and save the changes.

When the “unaffiliate” button is clicked, the user no longer belongs to that role. This is deleting the user from that role. If you look at the previous screenshot, the student Akshay Pappu is no longer in the database. Unaffiliated works for all roles and will delete the student (Akshay) from any of the databases for each position that he was previously in a data table for.
